

Network Security Consulting

You are not alone.

No one is immune to it. Malware has infected a PC somewhere on the LAN, and it's spewing out scans or SPAM or who-knows-what. How do you find the rogue machine? When do you have the time to even start looking? Call us. Together, we will solve it. Our experience with Intrusion Detection and Prevention gives us the unique ability to fix these problems quickly, saving you time, and saving your company money. We call it 911Security.

Here is how it works.

You are assigned an incident response manager.

A security specialist, a real human being you can talk to, and someone that will be with you through each step of the remediation process. And, you'll be able to follow the progress through our online support center at <http://support.econet.com>.

Overnight shipment of our Extrusion Protection Sensor (EPS) to you.

Our EPS unit is simple to install and configure, and can be up and running on your network in less than five minutes. It arrives with a simple guide that will take you step-by-step through the configuration. This unit has advanced diagnostic and monitoring tools our security support team will use to assist you in remediating your security issue.

Provision our EPS to monitor for botnet and malware activity.

Once our unit is online, the EPS device has a fully functional user interface and reporting module, so you can watch and track the results of our service. (911Security's one-time fee covers 30 days of EPS monitoring.)

Active monitoring of flow data for unauthorized internet gateway traffic.

This is the step that makes us different. We're not just the little black box. We utilize our device to actively monitor and analyze the data, identify the problem, and help you fix it. Not all malicious traffic can be identified with an IDS, IPS, or EPS, so we will work with you to monitor and review traffic on the network. Real people, there to help you solve the problem.

External Mapping Scan by an ASV (Authorized Scanning Vendor)

We use this tool to learn how your network shows itself to the bad guys. The scan will list the vulnerabilities of your network, detail the severity of the issues, and suggest remediations. A comprehensive report of the scan is included with our service.

Who are we?

Econet.com, Inc. is a Dallas-based provider of Sentinel Intrusion Prevention and Extrusion Protection services. We have devices deployed around the world, working together to protect businesses and government agencies.

What do we do?

We provide a low-cost, low-maintenance IDS/IPS solution that is easy to implement and even easier to maintain.

911Security is a natural extension of our Sentinel IPS product, and provides another example of our commitment to protect your right to be secure.

Questions about the service? Not sure about pricing? Call us. We'd love to talk to you about it.

Call us at (972) 991-5005, or email us at support@econet.com. A real person will answer the phone or reply to your email.

Our mission is to protect your right to be secure. Learn more at <http://www.networkcloaking.com/cis>.
